## Daily Dilemma \#11: Answer Key

1. The shapes in $A, B$ and $C$ are congruent because the two shapes in each pair has the same size and shape.
2. He put $1 / 3$ of $1 / 2$ of the lenses in the drawer. So $1 / 6$ of the total number of lenses is 3 . Then he must have made $3 \cdot 6=18$ lenses.
3. $B$ folds into a cube. In each of the other cases, a side is either covered twice or is left uncovered.
4. 

| Row | 1 | 2 | 3 | 4 | 5 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Number <br> of clams <br> in a row | 2 | 4 | 6 | 8 | 10 |
| Total <br> number <br> of clams | 2 | 6 | 12 | 20 | 30 |

5.
