## Daily Dilemma \#3: Answer Key

1. Let $\mathrm{a}=$ Prince Henry's age when he became interested in ships

$$
2(a+12)=50 \text { so } \quad a=13 \text { years old }
$$

2. 

| Turns of <br> wheel | 3 | 6 | 9 | 12 | 15 | 18 | 21 | 24 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Height <br> of sail | 4 | 8 | 12 | 16 | 20 | 24 | 28 | 32 |

So 24 turns of the wheel opens the sail 32 feet. Every time the wheel turns 3 times, the height of the sail increases 4 feet.
3. $56+56+\square=187$

The third side is 75 feet long.
4. $3 \times 5=15$ meals
5. $129 \div 3=42$ sailors on each ship
