

TIM: Active Learning

This table contains the extended descriptors for Active Learning on the Technology Integration Matrix (TIM).

The Active attribute makes the distinction between lessons in which students passively receive information and lessons in which students discover, process, and apply their learning. Student engagement is a key component of active learning. Descriptors for typical student activity, teacher activity, and instructional settings for Active learning are provided below.

Active Learning <i>at the</i> ENTRY LEVEL	Active Learning <i>at the</i> ADOPTION LEVEL	Active Learning <i>at the</i> ADAPTATION LEVEL	Active Learning <i>at the</i> INFUSION LEVEL	Active Learning <i>at the</i> TRANSFORMATION LEVEL
<p>Students. Students receive information from the teacher or from other sources. Students may be watching an instructional video on a website or using a computer program for “drill and practice” activities.</p> <p>Teacher. The teacher may be the only one actively using technology. This may include using presentation software to support delivery of a lecture. The teacher may also have the students complete “drill and practice” activities on computers to practice basic skills, such as typing.</p> <p>Setting. The setting is arranged for direct instruction and individual seat work. The students may have very limited and regulated access to the technology resources.</p>	<p>Students. Students are using technology in conventional ways and the locus of control is on the teacher.</p> <p>Teacher. The teacher controls the type of technology and how it is used. The teacher may be pacing the students through a project, making sure that they each complete each step in the same sequence with the same tool. Although the students are more active than students at the Entry level in their use of technology, The teacher still strongly regulates activities.</p> <p>Setting. The setting is arranged for direct instruction and individual seat work. The students may have very limited and regulated access to the technology resources.</p>	<p>Students. Students work independently with technology tools in conventional ways. Students are developing a conceptual understanding of technology tools and begin to engage with these tools.</p> <p>Teacher. The teacher chooses which technology tools to use and when to use them. Because the students are developing a conceptual and procedural knowledge of the technology tools, The teacher does not need to guide students step by step through activities. Instead, The teacher acts as a facilitator toward learning, allowing for greater student engagement with technology tools.</p> <p>Setting. Technology tools are available on a regular basis.</p>	<p>Students. Students understand how to use many types of technology tools, are able to select tools for specific purposes, and use them regularly.</p> <p>Teacher. The teacher guides, informs, and contextualizes student choices of technology tools and is flexible and open to student ideas. Lessons are structured so that student use of technology is self-directed.</p> <p>Setting. Multiple technology tools are available in quantities sufficient to meet the needs of all students.</p>	<p>Students. Students have options on how and why to use different technology tools, and often extend the use of tools in unconventional ways. Students are focused on what they are able to do with the technology. The technology tools become an invisible part of the learning.</p> <p>Teacher. The teacher serves as a guide, mentor, and model in the use of technology. The teacher encourages and supports the active engagement of students with technology resources. The teacher facilitates lessons in which students are engaged in higher order learning activities that may not have been possible without the use of technology tools. The teacher helps students locate appropriate resources to support student choices.</p> <p>Setting. The arrangement of the setting is flexible and varied, allowing different kinds of self-directed learning activities supported by various technologies, including robust access to online resources for all students simultaneously.</p>
