The Technology Integration Matrix: Introducing the Five Levels of Tech Integration
The Technology Integration Matrix

Levels of Technology Integration

Entry Level
The teacher begins to use technology tools to deliver curriculum content to students.

Adoption Level
The teacher directs students in the conventional use of technology tools.

Adaptation Level
The teacher facilitates students in exploring and independently using technology tools.

Infusion Level
The teacher provides the learning context and the students choose the technology tools to achieve the outcome.

Transformation Level
The teacher encourages the innovative use of technology tools. Technology tools are used to facilitate higher order learning activities that may not have been possible without the use of technology.

Characteristics of the Learning Environment

Active Learning
Students are actively engaged in using technology as a tool rather than passively receiving information from the technology.

Collaborative Learning
Students use technology tools to collaborate with others rather than working individually at all times.

Constructive Learning
Students use technology tools to connect new information to their prior knowledge rather than working individually.

Authentic Learning
Students use technology tools to link learning activities to the world beyond the instructional setting rather than working in decontextualized assignments.

Goal-Directed Learning
Students use technology tools to set goals, plan activities, monitor progress, and evaluate results rather than simply completing assignments without reflection.

Active Entry
Information passively received

Collaborative Entry
Individual student use of tools

Constructive Entry
Information delivered to students

Authentic Entry
Use unrelated to the world outside of the instructional setting

Goal-Directed Entry
Directions given; step-by-step task monitoring

Active Adoption
Conventional, procedural use of tools

Collaborative Adoption
Collaborative use of tools in conventional ways

Constructive Adoption
Information delivered to students

Authentic Adoption
Use unrelated to the world outside of the instructional setting

Goal-Directed Adoption
Conventional and procedural use of tools to plan or monitor

Active Adaptation
Conventional, independent use of tools; some student choice and exploration

Collaborative Adaptation
Collaborative use of tools in conventional ways

Constructive Adaptation
Information delivered to students

Authentic Adaptation
Use unrelated to the world outside of the instructional setting

Goal-Directed Adaptation
Purposeful use of tools to plan and monitor; some student choice and exploration

Active Infusion
Choice of tools and regular, self-directed use

Collaborative Infusion
Choice of tools and regular use for collaboration

Constructive Infusion
Information delivered to students

Authentic Infusion
Choice of tools and regular use in meaningful activities

Goal-Directed Infusion
Flexible and seamless use of tools to plan and monitor

Active Transformation
Extensive and unconventional use of tools

Collaborative Transformation
Collaboration with peers and outside resources in ways not possible without technology

Constructive Transformation
Extensive and unconventional use of technology tools to build knowledge

Authentic Transformation
Innovative use for higher order learning activities in a local or global context

Goal-Directed Transformation
Extensive and higher order use of tools to plan and monitor
Five Levels of Technology Integration

Each column of the Technology Integration Matrix represents one of the five levels:

- Entry Level
- Adoption Level
- Adaptation Level
- Infusion Level
- Transformation Level

For each level:

**Entry Level**
- The teacher begins to use technology tools to deliver curriculum content to students.

**Adoption Level**
- The teacher directs students in the conventional and procedural use of technology.

**Adaptation Level**
- The teacher facilitates students in exploring and independently using technology.

**Infusion Level**
- The teacher provides the learning context and the students choose the technology.

**Transformation Level**
- The teacher encourages the innovative use of technology tools. Technology tools are used to facilitate higher order learning activities that may not have been possible without the use of technology.
Levels of Technology Integration

ENTRY

The teacher begins to use technology tools to deliver curriculum content to students

At the Entry level, typically the teacher uses technology to deliver curriculum content to students. Entry level activities may include listening to or watching content delivered through technology or working on activities designed to build fluency with basic facts or skills, such as drill-and-practice exercises. In a lesson that includes technology use at the Entry level, the students may not have direct access to the technology. Decisions about how and when to use technology tools as well as which tools to use are made by the teacher.
Levels of Technology Integration

ADOPTION

The teacher directs students in the conventional and procedural use of technology tools.

At the Adoption level, technology tools are used in conventional ways. The teacher makes decisions about which technology tool to use and when and how to use it. Students' exposure to individual technology tools may be limited to single types of tasks that involve a procedural understanding.
Levels of Technology Integration

ADAPTATION

The teacher facilitates students in exploring and independently using technology tools.

At the Adaptation level, the teacher incorporates technology tools as an integral part of the lesson. While the teacher makes most decisions about technology use, the teacher guides the students in the independent use of technology tools. Students have a greater familiarity with the use of technology tools and have a more conceptual understanding of the tools than students at the Adoption level. They are able to work without direct procedural instruction from the teacher and begin to explore different ways of using the technology tools.
Levels of Technology Integration

INFUSION

The teacher provides the learning context and the students choose the technology tools to achieve the outcome.

At the Infusion level, a range of different technology tools are integrated flexibly and seamlessly into teaching and learning. Technology is available in sufficient quantities to meet the needs of all students. Students are able to make informed decisions about when and how to use different tools. The instructional focus is on student learning and not on the technology tools themselves. For this reason, Infusion level work typically occurs after teachers and students have experience with a particular technology tool. The teacher guides students to make decisions about when and how to use technology.
Levels of Technology Integration

TRANSFORMATION

The teacher encourages the innovative use of technology tools. Technology tools are used to facilitate higher-order learning activities that may not have been possible without the use of technology.

At the Transformation level, students use technology tools flexibly to achieve specific learning outcomes. The students have a conceptual understanding of the tools coupled with extensive practical knowledge about their use. Students apply that understanding and knowledge, and students may extend the use of technology tools. They are encouraged to use technology tools in unconventional ways and are self-directed in combining the use of various tools. The teacher serves as a guide, mentor, and model in the use of technology. At this level, technology tools are often used to facilitate higher order learning activities that would not otherwise have been possible, or would have been difficult to accomplish without the use of technology.
